Collision RECONstruction

May 8 - 19, 2023

The Collision Investigator's understanding of vehicle dynamics will be increased in this class through Time/Distance studies and Vector Sum Analysis in conjunction with additional work in Momentum. Students will have extensive training in placing vehicles in the scene, determining direction of travel, contact, & maximum engagement from physical evidence. Taught by Tim Lovett & Crash Dynamics staff

Course Topics Include: Time/Distance Cause Analysis Momentum Disciplines
Vector Sum Analysis Newton's Laws Vehicle Behavior

Each student who successfully completes this course will have taken several collision projects from the starting analysis to a completed reconstruction, including a vector sum analysis. There will be field work involved in this course!

Prerequisites: Advanced Accident Investigation (80 hour)
or its equivalent.

Supplies required: Scientific Calculator & Laptop computer

Course Tuition: \$ 1495.00*

\$ 150.00 DISCOUNT for first 5 registrants

Additional discounts available for Advanced/RECON package
